Access Floor:

Microtac MFS 800/1000 All Steel with Cementitious Infill Panels (Bare/HPL)

Understructure:

Corner Lock/ Rigid Grid Bolted Stringer

Floor Height (mm):

150 and 1,000

Project Description

DC West is a purpose-built 7-storey data centre located in Jurong. As a tier 3+ data centre that is equipped with state-of-the-art data centre facilities, the building requires higher technical specification such as high floor loading capacity of 12KN/m² and a raised floor height of 1m.

Microtac Systems was able to meet the client's stringent technical specification with its access floor system. Our floor panels are designed to deliver high structural load bearing capacity and the underlying supporting structure is configured to provide maximum stability for the occupants.
